For Immediate Release:

Orbit launches OrSat (AL-7103 MKII) – The latest innovative two-way marine antenna system for broadband satellite communication

City of Industry, CA, USA – Monday February 19, 2007 – Orbit announces the launch of OrSat (AL-7103 MKII) – a breakthrough antenna system that delivers non-stop quality transmission to marine vessels anywhere at sea, under any condition at optimum cost-effectiveness. The OrSat easy to install antenna increases reliability, saves space and significantly reduces costs of ownership through its steady transmission rate, rugged structure, best Radome to Antenna size ratio and very low maintenance needs. The innovative four-axis antenna system configuration allows continuous tracking of the satellite with no zenith or horizon keyholes. In addition, the unique signal multiplexing technology using only one cable between the ADE (Above Deck Equipment) and BDE (Below Deck Equipment), along with its sophisticated satellite acquisition concept makes the OrSat an easy to install plug & play system.

"We believe the technological breakthroughs in OrSat have created new standards in maritime satellite connectivity, set to enhance the end users' day-to-day communication at increased cost-effectiveness. We are particularly proud to be the pioneer manufacturer to receive various satellite operators' approval as it demonstrates the industry's support and high regard for our technological achievements", said **Admiral (res') Yossi Levi, Senior VP Sales & Marketing, Orbit Technology Group**.

Optimum transmission under any condition - "OrSat is a real asset to our company", says **Mr. Orlando Castillo, General Director, Aitelecom**. "The ability to ensure our customers that they can be online at all times with no disruption is critical. They need this to run their daily routine smoothly without worrying about downtime or disconnects," He adds. " Finally, we have a system to offer, that is easy to install, easy to manage and easy to maintain, giving us and our clients total peace of mind."

About Orbit Technology Group:

Orbit Technology Group is a leading designer, developer and manufacturer of a wide range of Stabilized Satellite Communication Systems, enabling mobile platform-to-satellite connections. Our systems support broadband satellite communications such as: TV, Data, Internet (2 Mbps up link), Video, VoIP and more, delivering a full range of SATCOM solutions for mobile air, land and marine platforms.
